WHERE HE CAME IN.

He gazed tenderly into her eyes as she spoke.

"Life," she murmured dreamily, "is, after all, nothing but a romance, in which we are the characters, moving hither and yon as the Supreme Author of our being directs."

"And in the novel of your life," said he, tenderly, where do I come in?"

"You?" she answered, with a smile. "Oh, you are—let me see—one, two, three—you are Chap Seventeen."—Harper's Weekly.

Airships As Big As Liners
A Probability Of Future

LONDON, Sept. 5.—At the British Association meeting yesterday the future of aviation formed a subject of discussion in the mathematical and engineering sections.

The chief feature was an attack upon the notion of automatic stability. At the present time a great many designers of aeroplanes are working on this problem in the construction of flying machines, yet both Prof. Petavel and Sir William White derided the idea.

No subject, said Mr. Berriman, in opening the discussion, was of greater interest to the public than flying. So far the art had progressed by reason of the daring of airmen and the enterprise of aeroplane builders; now it ought to attract the minds which had matured, inasmuch as the next great line of advance should bring the aid of science in increasing the safety and efficiency of flying machines.

Dr. W. N. Shaw, the well known meteorologist, discussed the difficulty which the wind puts in the airman's way, a difficulty which, he thought, could only be overcome by greater speed. This, however, would not get over the trouble of 'holes' in the air, into which aeroplanes fell now and then with results greatly disconcerting to their pilots. Meteorology was

trying to discover what these holes in the air were. They might be due to variations in the velocity of the wind.

Prof. Petavel, who had just returned after a month's flying on Salisbury Plain, threw doubt upon the possibility of obtaining automatic stability, and even said he did not think it was necessary or desirable. The tricycle was stable and the bicycle was unstable, but almost all people preferred the latter, and a mechanism in the air for insuring automatic stability would probably be dangerous in other ways.

With this view Sir William White agreed. He said he felt an instinctive distrust in automatic appliances. In his opinion there was nothing like human power directed by a strong will and careful observation. As to the general question regarding what science could do for aviation, Sir William said flying problems must be attacked experimentally. The help the mathematician could give was in analyzing the results obtained by experiment.

Prof. Trouton said he looked forward to the day when aeroplanes would be as big as Atlantic liners, and could afford to disregard the small 'holes' in the air that had been mentioned.

JURY PRAYED

(Continued from page nine.)

her for the baby whose little hands now reach vainly for its mother's fair white breast."

The effect of Wedenburg's speech in its entirety was fairly electrical, and Judge Watson, mentally deprecating anything that might savor of a snap verdict, ordered Sheriff Gill to give the jury ten minutes' exercise on the courthouse lawn before locking it up in the peaked roof attic directly above the courtroom.

Hears the Jury's Prayer.

The first act of the jury when they entered the room was to pray. Juror Blankenship led the prayer.

Faintly the reverent tones of his voice in prayer reached the ears of the prisoner. He stared for an instant at the ceiling, then suddenly unfolded his newspaper and seemed to be engrossed in it. But his eyes were conveying nothing to him from the pages. They were dancing wildly. With a huge palm leaf his father fanned his youth's brow.

He was unmindful of the attention apparently. There had come upon his face an expression entirely different from that of flippancy and confidence which he had so amazingly shown on former days of his trial.

The man was looking into the unknown; into the tremendous mystery of death. The lines of dissipation were missing. His eyes had grown strikingly luminous and large. His high forehead and wavy hair, the whiteness of his face and the sharpening of his features under the strain had taken away his habitual sneer. His face had become piteous and very young.

Agree on First Ballot.

The discussion of the case upstairs proceeded solemnly, and from the beginning it had only one trend. Each juror told his fellows what most firmly convinced him of the young man's guilt. They took only one ballot. It was unanimous for Beattie's death.

Later the twelve men admitted to their friends that they stood in judgment not only over the cold-blooded murder, but upon his marital infidelity as well.

Beattie's eyes, big and scared, searched the faces of the incoming jurors half madly. Intuitively he seemed to read in their averted faces the decision that they had reached. He sat back quickly in his chair and rapidly buttoned his blue serge coat, gave a swift touch to his white lawn pocket and a swift thrust to his thick, wavy hair.

Holding his neck rigidly, he whispered something to his father that the old man did not hear. Beattie, Sr., was drumming the edge of his palm-leaf fan with lightning fast touches on the table.

The jury was polled and Clark Coghill asked them if they had reached a verdict. There came the answer from Foreman Burgess that they had.

"What is your verdict, gentlemen?" Beattie winced as keenly as if he had been struck across the eyes with a switch. It was not only the deadly verdict that was rendered against him, but the manner of deliverance that stung.

Jurors Shout Their Verdict.

The jury did not wait for their

foreman to speak. Every man of them shouted "Guilty," and some repeated the cry, "Guilty, guilty, guilty."

A curious thing happened—such a thing as a dramatist might have devised as an effective "piece of business." On the instant with the rendering of the verdict a breeze swept through the open doorway, across the judge's desk, and extinguished the light of the lamp that stood there. Symbolically it suggested the ending of a life.

Sentence Is Pronounced.

The sentence pronounced by Judge Watson must rank as a most remarkable utterance from the bench. It was expressed in the softest of voices by the fine-featured, youthful, but eminent jurist. Its keynote was pity. To a sensitive man it would have been a far harder condemnation to hear than would have been a savage exhortation. And Beattie is not stupid. He began to sway slightly soon after Judge Watson began speaking, and the judge paused in the sentence to say to one of his counsel:

"Mr. Carter, your client has my permission to take his seat."

Beattie sank down quickly into the chair. With hands clasped in front of him on the table and fingering his dead mother's ring, he listened.

"I have no desire," said the judge, "to say anything to add to the anxiety of mind or to further disturb the peace of this prisoner. I desire to repeat that the rulings of this court, if they have had any bias, have leaned to the side of the prisoner, and not the commonwealth. I approached

this trial with a feeling that, I believe, was shared by the jury and the public and by all citizens of Virginia—with the hope that this young man would be able to produce testimony that would exculpate him and satisfy the jury of his innocence. I would have rejoiced at the establishment of his innocence and the lifting of this stain from the community of Chesterfield county, and I would have rejoiced at the relieving of his estimable family of the shame of this stigma.

Had Hoped for Acquittal.

"There is no legal right that has not been afforded this prisoner, and it is a deep, personal disappointment to me that the evidence has turned out as it has, and I exceedingly regret the absolute necessity of the verdict that has been rendered."

"Mr. Beattie, your situation greatly appeals to my sympathy. As a young man you started life with unusual advantages. Much that poor youths have to bear in the struggle was spared you. You bore a good family name, you had the devotion of friends, youth and health, and a long life before you with the future foreboding no evil. It is sad that such a prospect should be so dreadfully altered. I desire to say nothing in this regard to add to your mortification, and it is far from me in this hour to heap upon you reproaches for your misdeeds."

With pity in his voice the judge pronounced the fateful words:

"The jury has found you guilty in the first degree and therefore your life is forfeited, and the judgment of this court is that November 24 you be delivered into the custody of the superintendent of the penitentiary and that between the hours of sunrise and sunset your life shall be extinguished."

Meets Blow Unflinchingly.

Beattie's fortitude was here really amazing. He had sat with eyes hungrily taking in the sympathy that was in the judge's voice. He never blinked when the death sentence was passed. But at the reverent conclusion he gave a quick, short nod of his head to signify that he had heard and understood.

The jurors who had convicted him had remained in their chairs and heard him sentenced to die. They showed no outward emotion. The eyes of every man of them looked squarely at the prisoner as the death sentence was pronounced. If he was conscious of their scrutiny he ignored it.

Embraced by Father.

In the hush that followed the passing of the sentence the youth's father suddenly put out his arms and drew his son to him. Beattie yielded to the pressure as might a little boy. He leaned against his father, and his wide, staring eyes slowly closed, or, rather, half closed, as though he winced in pain.

MOUNT TALMAHAIS.

(Continued from page nine.)

they are in use throughout the world. The auxiliary telescopes are to be installed particularly for sun observations.

A specialty is to be made of sun observations for the purpose of learning how the relation between the sun and the earth affect weather, earthquakes and tides.

The spectro-heliograph is to be used for obtaining indirect photographs of the sun. Professor George E. Hale of Mount Wilson has recently obtained some notable results in sun photography by employing the spectro-heliograph, and similar work is now being done at the Yerkes Observatory.

CONGRESS TRIP
TO PHILIPPINES

WASHINGTON, August 24.—Congress adjourned without any arrangements being made to send the proposed Congressional delegation on a visit of inspection of the Philippines. There will be no visit in the present recess, but Speaker Clark and Chairman Jones of the insular affairs committee are expected to arrange a trip soon after Congress adjourns in June or July next year so as to be used as good Democratic material in the closing days of the campaign.

All of the Philippine independence resolutions which were referred to the committee on insular affairs were not reported out of the committee and must hold over to the regular session in December.

INTELLECTUAL LIFE IN JAPAN.

The position of the literary men in Japan differs in many essential respects from that which is accorded writers of prominence in the Western world. The individuality of literary fame and literary personality in its various aspects have not been developed in the Orient to nearly the same extent as in the West. The great books to which men return again and again for guidance and inspiration have been written thousands of years ago, and those men who earned fame thereafter won their laurels by writing commentaries upon the classics. No merit attached to originality. Moreover, most writings were anonymous. Especially if they were original was it advisable that the author should not make his personality too prominent. While learning was always respected, authorship never had the position in Japan and other Oriental countries that it has enjoyed in the West, from the Greeks down to the present.

The Japanese mind will excel in the future in many directions, but the greatest development may be expected in those activities for which racial and social experience has best prepared the intellect. A strong but selective realism in literature, delicate word-painting, the successful search for mastery over the forces of nature, a grasp of social and political relationships—these are among the things we expect from the Japan of the future—Paul S. Reinsch, in North American Review.
